

SAFETY IN OUR COMMUNITY

is of the utmost concern for us all. Good lighting helps to promote safety and energy efficiency while allowing us to be a caring neighbor in our community.

Install and maintain exterior lights:

- Preferably LED; LED lights provide better visibility, last longer and can reduce the impact on utility bills
- Exterior lights with a sensor, to allow for energy efficiency (lights to turn on automatically at sundown and to turn off at sunrise)
- Install lighting in a way that provides a clear view of the area, whether that be the front of the property or the parking lot
- Encourage tenants to turn on exterior lights at sundown

Maintain landscaping – the 6ft/2ft rule is a good rule of thumb to apply to properties:

- Maintain shrubs so that they grow no taller than 2 feet above the ground
- Tree canopies should be at least 6 feet off the ground
